CS110 / INDEPENDENCE ROAD

Working draft not an issued form / Daniel P

Issued: Nov 11, 2026, 6:30 PM Pacific

Record: WORKING-DRAFT

Personal public verification code: VIEW-F7D74B4BB42295C1385C9AC8

Include your own public code with every assignment, even in a team folder. Never submit your private recovery key.

SHA-256: Not issued. No authentication number. Create the numbered forms in the assignment.

Verify the record number at courses.addp2p.com/development-road/independence/index.html?view=verify

An issued record preserves submitted information. It is not a grade or proof of comprehension.

Allowed p2p into my week 12A repository

access

i allowed P2P access to my week 12A on tuesday

video1

Video 1's overview

how to build a mindset to stay focus on game developing and how to grow and build yourself up on game development .

take notes and take your time don't rush yourself rewatch the video or set up if needed

pace yourself and build yourself up don't let others mess up your thoughts or your ideas

video2

Video 2 overview: for game development you need Creativity and innovation to build a stronger mindset.

Perseverance you need to stay strong and patience so that you can be strong for those around you and not drag down your team help them help you

Adaptability: learn to adapt even when the industry are constantly changing and becoming different

collaboration you need to be open to collaborating and talking to make work less stressful and have a good mindset to help those around you.

Customer mindset: personally from my opinion this ties into perseverance cause you have to keep pushing forward and think of the end goal of the game or the product for the consumers/customers

have positive role models don't be afraid to receive criticism don't see that as people trying to tear you down grow from it is similar to that of failure when one person fails they learn and adapt and try t be better

scope creep don't get to carried away with the game remember the story the development and don't go crazy cause it will its story.

video3

Video 3 Overview: why its important to have important folder an file Structure?

its important to have a good folder and file structure is cause it helps when in a team and helps when creating to keep

stuff organized for your group.

creating a text document and doing a .log file with a header to keep your stuff in check and in order

you can have file and folders that can seem to be holding the same stuff so be careful for that.

video4

Video 4 overview: Documentation

there isn't much my brain is finding useful but ill say when make documentation to have the stuff you need like your games title the day and times logs an your team members

video5

Video 5 overview intro to unity: make sure to have unity hub open and ready you will need a unity file.

make a folder for your game select the pathway you want your game code to be in

make your file name shorter if your getting a error

remove the file then remove the file in the unity hub

video6

Video 6 overview import custom player: go to mixamo.com to download models for free.

make sure the files you use are in your drive so our team can download it as well if they need it.

don't delete folders in unity that are not hollow if they aren't see through then don't delete if they are then you can delete them.

don't leave all your stuff in your asset

opinion

my interpretation on what this pipeline contribute to a prior or new story is that it teaches you how to develop and make new things to help in unity and making models a story i can think of is when i first got into unity i didn't know much but with help like the videos i learned and got better.

questions

How long will it take with more knowledge

Do i need to install the P2P json file thing or is it optinal.

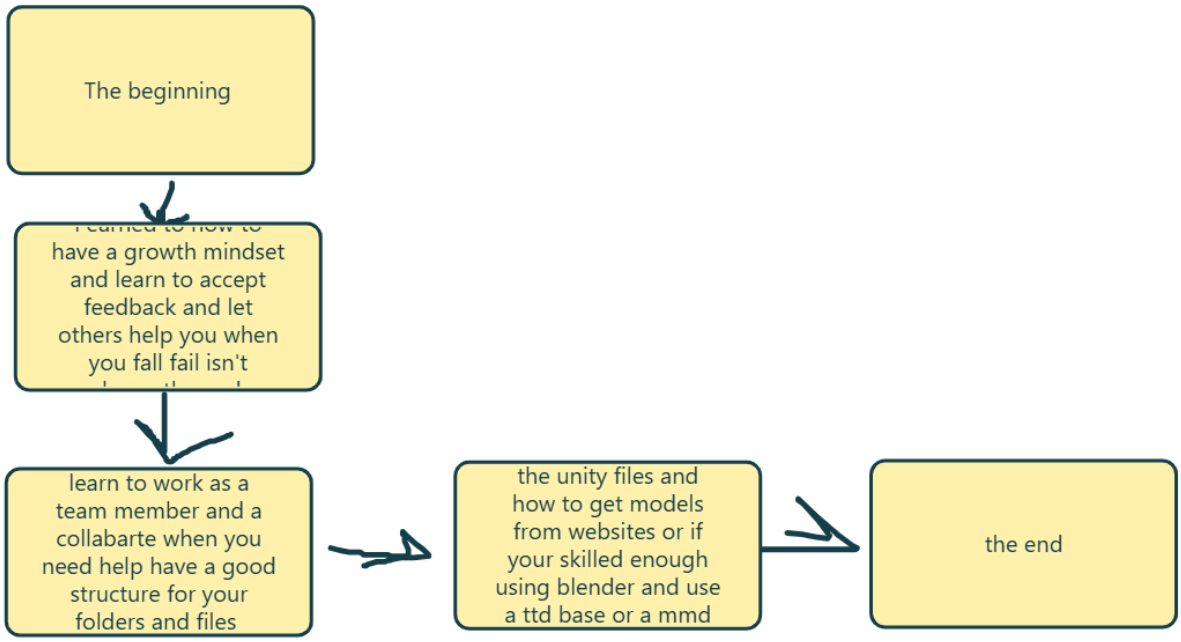

currentPage

Whiteboard

i explained each video on how i saw it and my opinion on what they mean and how they all work together or work into one thing in the end

CS110 / INDEPENDENCE ROAD

pitch

understand

i understand the work is hard but rewarding i understand that in the work we will need to know stuff like unity and other things for game development like the mindset collaborating with your team and your peers. for the finish line i understood the unity folders and setting everything together and making a folder for your project.

offer

i will help the team by doing research using ai when need i will help with the whiteboard and help my team when they need help and fall behind on the assignment if i understand it. I will also help with the code and if needed the GitHub repository.

limits

research is coding like python or C++ i want to learn and research many different codes to help with game making or program developing or even websites. my support is my team peers or ai. i need practice on communication and learning when to be quiet.

availability

Preferred contact: Classroom

discord is a easy place or in the class room and theirs no time limit

tools

my project tool will be Ai My brain and knowledge and google. we will need them for if we get confused or start to fall behind on the work.

aiTool

AI: Chat Gpt

Task: it will help us with the code or the setup of the project

Verification: good answer and us giving it the input for us to get our output

CS110 / INDEPENDENCE ROAD

Name

Chat Gpt

task

it will help us with the code or the setup of the project

verify

good answer and us giving it the input for us to get our output

huddle

mission

a story we want to see is a minecraft mod with aspects of pokemon. a playable goal is to be to throw a pokeball at a minecraft mod

framework

my team a I choose P2P for the simple fact it will help us with the use of organized sources and will help us with the game engine setup.

Assets owner Mio 2026-11-11T15:45 to 2026-11-10T17:37 Pacific

Body Frame owner Isaias 2026-11-11T16:22 to 2026-11-11T16:22 Pacific

Output owner Daniel 2026-11-11T15:45 to 2026-11-11T16:22 Pacific

Result owner Paul 2026-11-11T15:45 to 2026-11-10T16:22 Pacific

Background: Learn the lore from both source materials (Minecraft and Poke mon). Build the world of Minecraft, a free roam where the main character is a combination of Ash and Steve.

Assets: Assets: Getting the elements that will be edited and used in the creation of the mod: - Characters, text, animation, 3d models, fonts, audio, etc. Obtaining everything that will be used in order to achieve the results, aka also the things the audience will view.

Body Frame: Build/configure: Put the blocky world together, add an Ash-Steve character so he can walk around, and set up the basic controls for throwing Poke balls and catching Poke mon as well of building like in a Minecraft world.

The output is for are mod to allow the player/consumer to be able to throw a poke ball to a Minecraft mob it will also make a custom world when loaded for the player with bits of Poke mon while still looking like Minecraft.

Results: Results - We have achieved the results we wanted. We wanted to make a mod pack for the video game Minecraft where we added a poke-ball from Poke mon.

CS110 / INDEPENDENCE ROAD

tech

As a team we have chosen to use unity as the main engine for our game because of our knowledge in C#. We are also going to be using Unity Hub and Package manager. We chose this because based on the lesson videos we saw, we learned a few things about characters and how to create a functioning game, so we have information to get started. Additionally, it is also because we felt that it would be easiest to work with.

Time code

Classes & components

Class | Responsibility | GameObject

pokeballitem | Allows players to throw poke balls | Poke Ball

PokeballProjectille | Handles Poke Ball throwing and collision | Projectile

MobCaptureSystem | Detects and captures Minecraft mobs | Minecraft Mob

PokemonCompanion | Handles captured Poke mon companions | Pokemon Entity

PokemonWorldGenerator | Generates Poke mon-inspired terrain | Minecraft World

Variables / properties

Name : type | Value / purpose | Used by

pokeBallCount : int | Number of Poke Balls the player has | PokeBallItem

captureChance : float | Determines the chance of capturing a mob | MobCaptureSystem

targetMob : Entity | Stores the Minecraft mob being targeted | PokeBallProjectile

isCaptured : boolean | Checks whether a mob has been captured | MobCaptureSystem

pokemonName : String | Stores the captured Poke mon's name | PokemonCompanion

reuse

We can reuse the organization patters we are learning/learned from the 6 videos we saw on game development using Unity and Talsta. We can also reuse the story element to build upon what we have and use the skills we have learned to revise our work. We can also continue to further use AI to keep us on track and add new ideas.

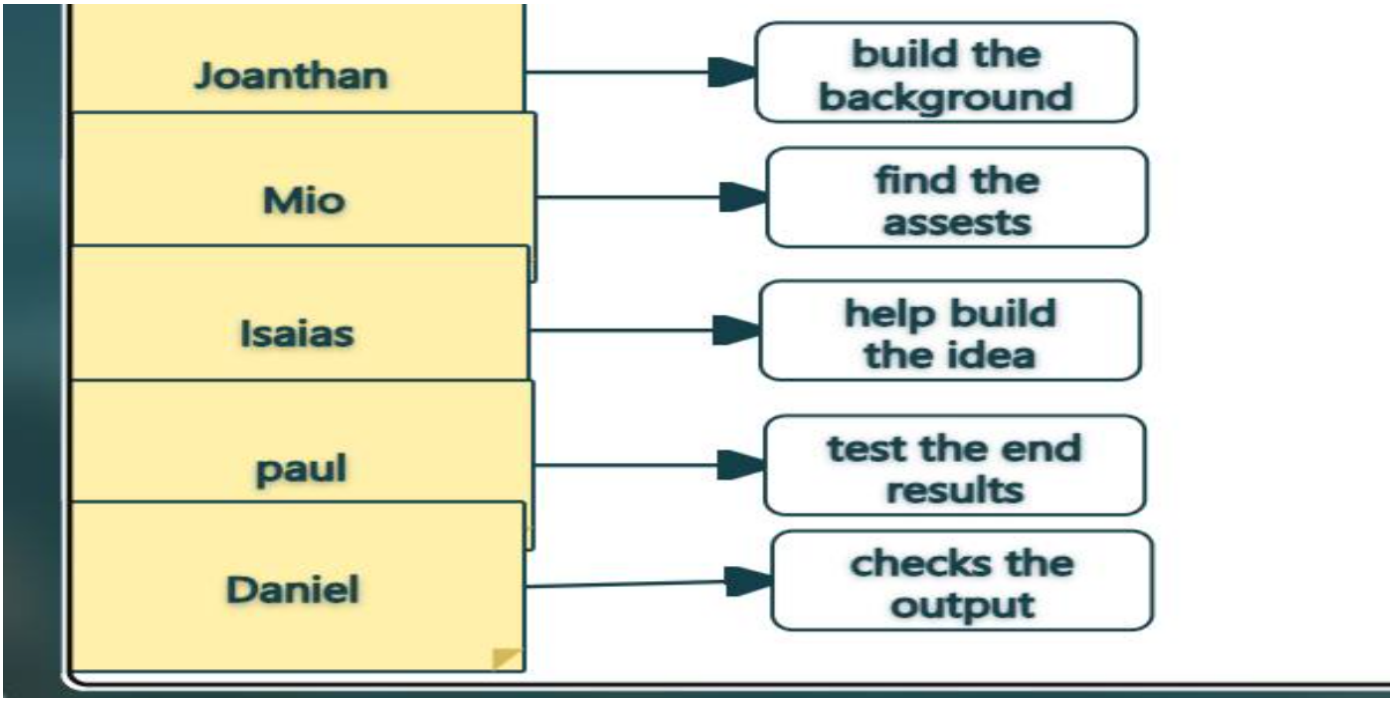

boardNotes

We all had planned to call over Zoom, however, we ran into technical difficulties so we decided to switch to Discord instead. We were on a call for over 2 hours working out our goals and coming up with ideas for our creation. We talked about what elements we want to include in our game, and we also created task boards to help us stay organized. We gave each other different jobs so we can work on separate things, we also discussed how we will be moving forward from this point on as a team.

Whiteboard

this diagram explains are teams jobs/roles that they will finish up and have done before the end of class
