Allowed p2p into my week 12A repository

Instructor access and team Git readiness: what did you test? Solo: say solo.

i allowed P2P access to my week 12A on tuesday

1 Introduction scan notes, one useful idea and one question

Video 1's overview

how to build a mindset to stay focus on game developing and how to grow and build yourself up on game development .

take notes and take your time don't rush yourself rewatch the video or set up if needed

pace yourself and build yourself up don't let others mess up your thoughts or your ideas

2 Developer mindset scan notes, one useful idea and one question

Video 2 overview: for game development you need Creativity and innovation to build a stronger mindset.

Perseverance you need to stay strong and patience so that you can be strong for those around you and not drag down your team help them help you

Adaptability: learn to adapt even when the industry are constantly changing and becoming different

collaboration you need to be open to collaborating and talking to make work less stressful and have a good mindset to help those around you.

Customer mindset: personally from my opinion this ties into perseverance cause you have to keep pushing forward and think of the end goal of the game or the product for the consumers/customers

have positive role models don't be afraid to receive criticism don't see that as people trying to tear you down grow from it is similar to that of failure when one person fails they learn and adapt and try t be better

scope creep don't get to carried away with the game remember the story the development and don't go crazy cause it will its story.

3 Folders and project creation scan notes, one useful idea and one question

Video 3 Overview: why its important to have important folder an file Structure?

its important to have a good folder and file structure is cause it helps when in a team and helps when creating to keep stuff organized for your group.

creating a text document and doing a .log file with a header to keep your stuff in check and in order

you can have file and folders that can seem to be holding the same stuff so be careful for that.

CS110 / INDEPENDENCE ROAD

4 Documentation scan notes, one useful idea and one question

Video 4 overview: Documentation

there isn't much my brain is finding useful but ill say when make documentation to have the stuff you need like your games title the day and times logs an your team members

5 Introduction to Unity scan notes, one useful idea and one question

Video 5 overview intro to unity: make sure to have unity hub open and ready you will need a unity file.

make a folder for your game select the pathway you want your game code to be in

make your file name shorter if your getting a error

remove the file then remove the file in the unity hub

6 Import a custom player scan notes, one useful idea and one question

Video 6 overview import custom player: go to mixamo.com to download models for free.

make sure the files you use are in your drive so our team can download it as well if they need it.

don't delete folders in unity that are not hollow if they aren't see through then don't delete if they are then you can delete them.

don't leave all your stuff in your asset

Your interpretation: what can this pipeline contribute to a prior or new story?

my interpretation on what this pipeline contribute to a prior or new story is that it teaches you how to develop and make new things to help in unity and making models a story i can think of is when i first got into unity i didn't know much but with help like the videos i learned and got better.

Questions to resolve before committing to a team or mission

How long will it take with more knowledge

Do i need to install the P2P json file thing or is it optinal.

Whiteboard

i explained each video on how i saw it and my opinion on what they mean and how they all work together or work into one thing in the end
